## SPECIFIC COMMENTS TO AUTHORS

The authors present a case of a 54-year-old male with a right basal ganglia hemorrhage. The emergency department performed the evacuation of intracerebral hematoma under the craniotomy microscope and evacuation of the hematoma was satisfactory. However, the patient presented with postoperative pulmonary infection with *Elizabethkingia miricola*, a rare non-fermenting Gram-negative bacterium that rarely causes human disease. For a better presentation of the data, the following issues need to be clarified:

- a. Since only 6 cases of *Elizabethkingia miricola* infection have been previously described in the literature, I recommend adding a table explaining the clinical features, etiology and prognosis of all the cases, including the present one.
- b. It would be interesting to mention in the Discussion that hematological disorders are another commonly unrecognized cause of hemorrhagic stroke in young patients (Expert Rev Hematol 2016; 9: 891-901). The inclusion and comment on this reference is recommended. Did the authors consider this in their study protocol?
- c. It would be appropriate to add a comment on the limitations of this case report.
- d. A brief concluding comment on possible lines of future research on the presented topic would
