

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 88863

Title: One case report of ischemic colitis induced by platelet-raising capsule

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 05089997

Position: Peer Reviewer

Academic degree: Doctor, MD, PhD

Professional title: Consultant Physician-Scientist, Professor

Reviewer's Country/Territory: Romania

Author's Country/Territory: China

Manuscript submission date: 2023-10-18

Reviewer chosen by: AI Technique

Reviewer accepted review: 2023-10-18 17:22

Reviewer performed review: 2023-10-24 17:17

Review time: 5 Days and 23 Hours

SPECIFIC COMMENTS TO AUTHORS

One case report of ischemic colitis induced by platelet-raising capsule Ischemic colitis represents a pathology with serious manifestations and high mortality. Being aware of risk factors, etiopathogenesis and elements that may influence its evolution is essential to the prognosis and well-being of the patients. The manuscript is relevant to clinical practice, as it presents the intricacy and difficulty of the differential diagnosis and of establishing the cause of disease. The manuscript is well-organized and structured, has a high level of written clarity, while the tables and figures participate in rendering the information easier to understand. There are a few elements that need attention in order to further increase the level of text clarity and understanding. 1. In the Introduction section, please change “where the vascular dysplasia is easy to ischemia” to “where the vascular dysplasia may easily cause ischemia”. 2. Please consider using “so the prognosis is favorable” instead of “so the prognosis is well”. 3.Regarding the Case report section, instead of the phrase “Most patients will improve clinical symptoms within 1 to 2 days”, please use “Most patients will present improvements of clinical symptoms within 1 to 2 days”. 4. Please change the phrase “The clinic was admitted

with "colonic multiple ulcers pending diagnosis" to "The patient was admitted in the clinic with "multiple colonic ulcers pending diagnosis". 5. Regarding the CT scan results, please consider replacing "Thickening and edema of the colon wall, considering inflammatory changes, please further examine if necessary, in combination with clinical practice" with "Thickening and edema of the colon wall, and possible inflammatory changes, to be furthered examined if necessary, in combination with clinical evaluation" and further, in the same paragraph "Colon wall changes, consistent with ischemic enteritis, please be combined with clinical" to "Colon wall changes, consistent with ischemic enteritis, to be interpreted within clinical context." 6. Please, instead of "Physical examination at admission: T 36.2°C P 97 times/min R 18 times/min BP 110/90mmHg clear consciousness, general spirit", consider using "Physical examination at admission: temperature 36.2°C, Pulse: 97 beats/min, respiratory rate 18 breath cycles/min, blood pressure 110/90 mm Hg, the patient is conscious, with normal mental status." 7. Please use Figure instead of picture throughout the manuscript. 8. Please consider "antibiotic" instead of "anti-infection". 9. Please consider using a more impersonal perspective regarding the interdepartmental discussion section and a more continuous presentation of the information. 10. Please keep a consistent use of verbal tenses throughout the manuscript. 11. In the Discussion section, instead of "However, given that the patient had a similar", please consider using "However, the patient had a similar" as there is no conclusion within the phrase. 12. Please replace "continuous deterioration of the disease" with "continuous progression of the disease". 13. Please consider using the phrase "Because it cannot show tertiary blood vessels, it is of little clinical significance." 14. Please consider the changes to the phrase "In addition, this patient presented blood in the stool when taking traditional Chinese medicine containing indigo naturalis, while when the drug was discontinued". 15. Please use the phrase "Pay attention to and treat the primary disease early, at the same

time applying symptomatic treatment.” 16. Consider using “and observe closely” instead of “close observation”. 17. In the Conclusion section, please consider using “Once abdominal pain, diarrhea, and blood in the stool occur, the drug should be stopped immediately, with implementation of active treatment, and avoidance of the further use the pathogenic drug.” After analyzing the manuscript, it can be considered for publication after making these changes.
