SPECIFIC COMMENTS TO AUTHORS

The case is interesting, but presentation must be improved. - I suggest changes in the title. "A brain abscess from oral microbiota approached by metagenomic next-generation sequencing" or something like that involving the role of mngs in diagnosis and treatment is desirable. - All details of clinical (a suboptimal mental state???), lab (Levels of immune markers and tumor markers were normal???) and other studies ((MRI) revealed multiple signal abnormalities????) done should be declared. - Figure captions should be detailed, in such a way that reader (with general knowledge of medicine) could understand the content and meaning of figures. - Discussion should be clear about the advantages of changes in treatment after mNGS-approach.
