<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

This is a typical presentation of an uncommon case. and so is worthy of publication. However, authors should i) go over the paper carefully as punctuation is badly done and numerous words are incorrectly spaced eg Theiraetiology remainsunclear.IPTs are known; multifocal IPTsalthough; case,there was; representa challengingclinico-pathologic entitydue to. ii) discuss the value of a percutaneous biopsy as the first investigative tool rather than only after a search for possible underlying primary carcinomas. Patient can then be spared the inconvenience and stress of undergoing negative tests. iii) indicate how rare the condition is, perhaps by relating the number of such cases seen in their unit relative to the overall number of hepatic masses treated.

COMMENTS TO AUTHORS

-You should be careful with punctuation and spaces between words; for example, in line 5 (1953(1).), in line 7 (tumours.(2).) or in lines 4 and 5 of case report. -Too many figures; perhaps it would be better one for computed tomography and one for magnetic resonance; you should name them as Fig 1, 2, 3 and 4. -It would be interesting to know something about the medical history of the patient: ?medication??autoimmune disorders?
