COMMENTS TO AUTHORS

The case report and the discussion are well-written. The manuscript would benefit from editing by a native English speaker.

COMMENTS TO AUTHORS

I thank you very much for giving the opportunity to review this manuscript. This case report adds some information to the current literature in its present form although this entity is not so rare especially in developing countries. Only some language editing is required. It will be beneficial for the readers if you can provide better axial CT image for thick, sac-like, contrast-enhanced membrane.

COMMENTS TO AUTHORS

The authors describe a case of abdominal cocoon along with a short literature review. Here are list of main concerns. 1. Though well written, a discussion on possible causes is lacking. 2. The authors state their observation of contrast enhanced membrane. However, they need to provide images in all 3 phases - non contrast, arterial phase and venous phase for objective determination of contrast enhancement. 3. Language improvement- I suggest the authors should get the manuscript edited by a native english speaking professional to enhance the quality.
