COMMENTS TO AUTHORS

Dr. Cohen reviewed the clinical and pathologic features, the associated chemicals, the hypothesized pathogenesis, and the management of follicular contact dermatitis in the manuscript, emphasizing Neomycin-associated follicular contact dermatitis. This review provides some useful information for the clinicians, who are interested in this area.

COMMENTS TO AUTHORS

This is an interesting review article discussing the occurrence of follicular contact dermatitis secondary to neomycin use. The manuscript is well-organized, the literature review was thorough, and the topic is of clinical relevance to the dermatological community.
