COMMENTS TO AUTHORS

The authors performed a well done and highly informative review on sleep disordered breathing in ILD. The review is well done and of high quality, data are collected carefully and interpreted adequately. Subchapters make the manuscript easy to read, and tables and the figure are very helpful. No major or minor criticisms on the manuscript!

COMMENTS TO AUTHORS

This is a well written review on the topic of ILD and sleep. There is one terminology issue that might benefit from clarification within the manuscript; f UIP is the term used for the main form of idiopathic fibrosis, and I would prefer this term to IPF (which could refer to UIP, NSIP or COP if no cause for the histological type is found). The manuscript might also benefit from soem figures. I would suggest one to illustrate the classification system for ILD - this would also show how UIP, NSIP etc which are pathological terms (with distinct radiological correlates) relate to clinical terms. A second could summarise the pathogenesis of sleep disordered breathing mechanisms in ILD.
