<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

The clinical report demonstrates a well-known anatomical finding of double major papillae. Comments: The rare finding is adequately addressed. However, demonstration of pancreatogram and ductogram could improve the manuscript.

COMMENTS TO AUTHORS

This case report is interesting, worth reporting and is well-written by the authors. However, inclusion of representative photos of this anatomic anomaly as taken through MRCP and ERCP would significantly enhance its scientific and educational value. If the authors are ready to make this addition the paper could be published without further assessment.

COMMENTS TO AUTHORS

The report is well-written, pointing out the importance of being aware of variations in the anatomy of the common bile duct, pancreatic duct. In the discussion, the authors should describe the difference between the variation seen in the present report (completely separates orifices for the common bile duct and pancreatic duct) and an accessory duct of Santorini.
