COMMENTS TO AUTHORS

Dear authors, You present a simple case report of a swallowed battery. The location inside the stomach was confirmed by a bloating agent for double contrast x-ray. The case report is well written and I have no major comments on your work. Sincerely,

COMMENTS TO AUTHORS

The paper describes a case in which an oral negative contrast media was used to localize a foreign body in the upper GI tract. The diagnostic procedure presented in this case report is quite interesting. Comments: 1) Page 2 "abstract": The expression "double contrast X-ray examination" is incorrect because a double contrast examination is performed using both positive (barium) and negative (gas) contrast agents. In this case only a negative contrast media was used. Please substitute this expression in the abstract and in the text where it does not indicate a truly "double contrast" procedure. 2) Page 3 "introduction": The phrase "A bloating agent can be administered internally..." is a bit unclear; please clarify. 3) Page 3 "case report": did the child present with symptoms or signs? Please specify. 4) Specify the commercial name or the composition of the bloating agent in the "case report" section of the paper.
