## COMMENTS TO AUTHORS

This is a well written case report describing a new surgical approach. It will be general interest to orthopaedic surgeons.

## COMMENTS TO AUTHORS

In my view this case does not bring any new meaningful information to the orthopaedic literature

## COMMENTS TO AUTHORS

This is a very well written article and worthy of publication. The authors are to be commended on adding to the body of the literature on fracture of the lesser tuberosity of the humerus, however, making a relatively strong suggestion on the treatment using a two-level reconstruction technique is definitely premature using a case report. With that said, we encourage the authors to remove or modify the following statement from the conclusion to limit their experience to the presented fracture and the patient.: “The satisfactory results that we noticed may encourage the use of this method as an alternative manner of management of isolated lesser tuberosity fractures in the future”
