**COMMENTS TO AUTHORS**

This is an exceptionally poorly written manuscript that oversteps the limited clinical observation and draws conclusions that aren't supported. Most of the paragraphs are single sentences with significant grammatical errors. However, the most troubling is the final sentence "Our case reports demonstrate that cabazitaxel improves PFS and overall survival in patients with brain metastases...." Do you believe 3 cases (not in a randomized trial) demonstrates PFS or OS improvement?

**COMMENTS TO AUTHORS**

ESPS Manuscript NO: 8765 Title: Cabazitaxel in castration resistant prostate cancer with brain metastases: 3 case reports Authors of the present manuscript describe 3 case reports about the role of cabazitaxel in patients with prostate cancer with brain metastasis. The issue is original and clinically relevant. However, I suggest some minor revisions in order to improve the quality of the manuscript: 1. Language improvement should be performed. 2. Data presented in the manuscript should not repeat data in the table. 3. Data reported in the manuscript should allow patient identification (patient 1, 2 or 3). 4. The type of androgen deprivation therapy received by patients should be reported.
