COMMENTS TO AUTHORS

This paper is worthy of publication as an interesting case report of uncommon oral mucosa disease in HIV infected patient. Particularly, an information of efficiency of KTP laser surgery in treatment of Heck’s disease will be useful for clinicians. However, I suggests to consider in discussion the recent literature of topic, such as: 1. Cubie HA. Diseases associated with human papillomavirus infection. Virology 2013; 445: 21-34 2. Said AK. Focal epithelial hyperplasia - an update. Journal of Oral Pathology & Medicine. 2013; 42: 435-50 I suggest also to change “similar” (p. 5 line 7) into “similarly” or “in the similar mode”. After these correction I will recommend this paper without reservations for publication in World Journal of Clinical Cases

**COMMENTS TO AUTHORS**

Very well written case and very good photographs. Would have been really great if you could add histopathology images. A bit more detail in the case history and examination would have been good. Was serology for syphilis done? Was HPV typing done? Why was KTP opted for? (Generally CO2 laser would have been the first option among lasers)
