COMMENTS TO AUTHORS

This manuscript is very informative. I think Adding the figure of classification may help reader's deeper understanding.

COMMENTS TO AUTHORS

The paper is a case report on a double cecal appendix, a very rare condition with only 100 cases described worldwide so far. The case presentation is interesting and chronologically described. I have several comments and suggestions. Major comments - The fourth paragraph of the case report section; please describe the finding of the resected ileum (anatomopathological examination. - Discussion section, third paragraph. Add a figure to the Cave Wallbridge classification, as this paragraph and the next are difficult to follow. - Discussion section, fourth paragraph. I don't agree with you, that the Cave-Wallbridge classification needs to be modified. In my opinion a double cecal appendix is too rare to modify this classification, so you can remove this part of the paper. - The paper is case report on a very rare condition. Although it is interesting and rare, there is not much news this manuscript is going to add to the current literature, except that surgeons should always carefully evaluate the appendix and cecum. - There are several textual and grammar issues, see a few of them below. I suggest to critically evaluate the manuscript by a native speaker. Minor comments Language issues - Abstract: o The last sentence is very long, I suggest to split it in two. - Introduction o Second sentence, just start with 'Woldwide approximately 100 cases..... - Discussion o Fifth paragraph; According to clinical data, he had never had any (remove first had)
