COMMENTS TO AUTHORS

Hello Dr. Rabia, I went through the manuscript, must say well written, or well compiled, extra-oral symptoms of DISH. My concern is about the number of references you quote in your manuscript, its more then 50, I think no. Should be reduced to 18 to 20. There are also some effect reported on Genital organs of males & females. That you didnt mentioned. I recommend you to put some light on it. Thirdly, you didnt follow the author guidelines of (wjcc). Read it carefully, that how the refrencing should be done. Bracket style. Overall it seems that you was in a hurry to send this manuscript. I recommend that please go through this for one more time the re- submit. Thank u, Regards Reviewer.

COMMENTS TO AUTHORS

This mini-review paper is generally well-written with the aim to review the extraskeletal symptoms and associated comorbidities in patients with diffuse idiopathic skeletal hyperostosis (DISH). This Reviewer has made the following suggestions aimed to improve the manuscript. 1) Include a new section under the topic of "Cardiovascular comorbidities" to specifically discuss and review the incidence and issue of stroke and other cardiovascular disorders (e.g., hypertension) in DISH patients. 2) Include a new section under the topic of "Metabolic comorbidities" to specifically discuss and review the incidence and other issues in regard to the metabolic comorbidities (e.g., metabolic syndrome and diabetes) associated with DISH.
