COMMENTS TO AUTHORS

1. The abstract must be rewritten because it is more an introduction that summarizes the work.
2. Should be clarified abbreviation (JXG-juveline giant xanthogranuloma).
3. Would be of great importance to readers postoperative care of the patient detailing.
4. The last sentence of the section "Pathology" is a typographical error (figure ...).
5. Where the electrodes are placed?
6. The last sentence of the conclusions is not the result of this work and should be removed.

COMMENTS TO AUTHORS

The paper describes a rare (probably unique) case of symptomatic giant xanthogranulomas of the pelvis in a 40 year old male. Authors explain clearly why they decided to manage surgically the lesion. Excision was successfully performed through a posterior route to avoid damages to the surrounding neurovascular structures. Symptoms relief was immediate and preserved one year after surgery. The paper is really interesting and needs only a minor language revision before publication.
