COMMENTS TO AUTHORS

Specific comments: 1. What do you mean the anatomical conditions of IgG4-related lesions? 2. How do you explain the relation between perforation and IgG4-RD? 3. What is an actual mechanism in perforation with reference to IgG4-RD? 4. What is the evidence that caused perforation in the present case?

COMMENTS TO AUTHORS

I read with great interest the manuscript entitled "A colovesical fistula caused by glucocorticoid therapy for IgG4-related intrapelvic mass" by Yabuuchi et al. The Case reported is interesting and well documented. The References are appropriate. Some orthographical and grammatical errors have been found throughout the manuscript. Minor comments: The Authors should explain in a few words the immunohistochemical procedure and report the antibody raised against IgG4 used. Furthermore the image 4 might be improved.
