ESPS PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

ESPS manuscript NO: 21524

Title: Histopathological confirmation of similar intramucosal distribution of fluorescein in both intravenous administration and mucosal surface dripping for probe-based confocal laser endomicroscopy of the normal stomach

Reviewer's code: 00181421

Reviewer's country: Taiwan

Science editor: Ze-Mao Gong

Date sent for review: 2015-07-17 18:00

Date reviewed: 2015-07-18 13:12

COMMENTS TO AUTHORS

Although this manuscript was submitted as a case report, it is not a clinical case. Instead, an experiment was performed on one subject and the outcome reported here. While there is clinical potential for this approach, it is unusual to publish one observation. This is especially a concern because the resolution were not the same between the iv and dripping administration (see Discussion). Since the authors put in effort in resolving technical issue, it should be relatively easy to obtain results from additional subjects to further validate the approach.

COMMENTS TO AUTHORS

1) The text "mucosal surface dripping" should be replaced by "local mucosal application of fluorescein" throughout the paper. 2) Gastric glands do not have acinar cells - "acinar cells" should be replaced by "glandular cells". 3) Minor linguistic revisions as detailed below: ? Page 1: should read "Neumann analyzed the data" not date ? Insert space before citations in text - e.g. page 5 lines 7- "fluorescein[1-3]" should be "fluorescein [1-3]" 4) In figures 3-6, please clarify if the fluorescence shown is on non-H&E stained slides. 5) Please refer to figures 3-6 in the text in the respective sections under results.
