### COMMENTS TO AUTHORS

A narrative review on a well-known topic. The paper should be reorganized in order to respond to some issues of the topic according to EBM rules and recommendations. The term aerodigestive should be avoided or better defined (asthma is also mentioned. Methodology incompletely described and results of th search not detailed.

### COMMENTS TO AUTHORS

I have one complaint, which concerns the core tip section: the authors repeat the signs and symptoms associated with reflux and respiratory and the purpose of their review of the literature. They should instead report the conclusions, point by point, of their work. For example, with regard to the administration of PPI as the initial stage of the treatment of respiratory symptoms associated with GORD, the evidence in the literature to support the treatment with PPI in the absence of the typical symptoms of reflux (heartburn and regurgitation) are scanty; and so on.
