		<input type="checkbox"/> Duplicate publication	
		<input type="checkbox"/> Plagiarism	
		<input checked="" type="checkbox"/> No	

COMMENTS TO AUTHORS

This review article is well written. It covers the progresses in the research areas of EMT, MET and EndMT, particularly in the major cancer types. It is readable and will be useful for scientists and research students. The only concern is why authors submitted this manuscript to "World Journal of Clinical Cases", which aims at publishing high-quality original articles, reviews, editorials, and case reports in the field of clinical cases. This review article discusses the progress of basic science. I would recommend it to be submitted to other World series journals, such as World Journal of Clinical Oncology, World Journal of Experimental Medicine, or World Journal of Translational Medicine. These three journals appear to be more suitable for this manuscript.
