COMMENTS TO AUTHORS

Its a useful article for TMJ imaging training in some pathological scenarios.

COMMENTS TO AUTHORS

Excellent article as far as it is written, but needs to replace tertiary (especially reference 1) with primary citations. Additionally, the differential should probably be expanded to include fibrous dysplasia, hyperparathyroidism, giant cell reparative granuloma and possible myeloma. The comment on human-function of speech requires a citation. The characteristics of Silver Russell and Proteus syndrome should be delineated. What is the evidence for the comment on ankylosis in rheumatoid arthritis. It occurs in juvenile rheumatoid arthritis and spondyloarthropathy. Only occurrence in rheumatoid patients seems to be in those who have received corticosteroids. Citation 14 should actually be 15.
