COMMENTS TO AUTHORS

Steroids alone or with methotrexate is a common treatment for IgG4-related diseases. However, in self-limiting or responders to less toxic treatments usually do not need antiCD20 drugs.

COMMENTS TO AUTHORS

We are surprised that the first line of treatment include RTX and MTX in addition to reasonable dose of GC. Please explain or cite the literatures on the possible options of treatment in this case (Many Japanese clinician will start with just GC first).
