COMMENTS TO AUTHORS

First of all, I would like to congratulate the authors for their contribution. It is well-written and documented, and has a good image support that improves its readability. There are some reflections that I would like to share with the authors: - Could you cite some data about prevalence of this case? You stated in the text (page 5), that has "relative morbidity". Could you be more specific with quantitative data. - In the obtained results description (page 4, line 4), you wrote that "post-operative profile and occlusal alignment was satisfying". Please, could you provide information about the outcome measures employed? What means "satisfying" exactly? From the clinician point of view or from the patient's perception? - Finally, have you thought about the possibility to mention the potential role of physiotherapy in the physical rehabilitation of these patients (temporo-mandibular joint, cervical spine, myofascial trigger points...)? Some considerations related with the journal writing requirements of case report: - Please, incorporate de CORE TIP in in your submission. - Following these recommendations, the title should be no more than 12 words. Please review. - In the Author Contribution, please remove the additional coma
