Posterior Reversible Encephalopathy Syndrome following sepsis in a Crohn's disease patient; a case report. Papaconstantinou Ioannis1, Mantzos S.Dionysios1, Pantiora Eirini1, Tasoulis Marios Konstantinos1, Vassilopoulou Sofia2, Mantzaris Gerassimos3 I am not a clinician but a quantitative analyst, and am assisting with this manuscript as much as I know. It is well-written with a need for grammatical improvement, listed below - Abstract PRES Need to define it. As suggestive by it's name it is reversible in most cases Its Chron's disease is considered a rare cause Crohn's disease the last nine months.The patient's previous operations the last nine months. The patient's previous operations four reoperations ever since due to fix - ever since Following discussion at our MDT meeting, Define After an new episode of fever, new After a new episode of fever, new according to the cultures sensitivities fix - cultures sensitivities such as in our case,possibly due fix - case,possibly First one involves an increase The first one involves an increase the most important factor that lead the most important factor that leads with PRES syndrome ,however it cannot with PRES syndrome, however it cannot slightly elevated (125 mmHg) This is the first

COMMENTS TO AUTHORS

You have presented a cogent account of an unfortunate series of events in a patient with Crohn's disease with a less well known albeit recognised complication of sepsis, PRES. I would recommend publication after a significant english language polish. There are a few typographical errors too which must be corrected.
