COMMENTS TO AUTHORS

The manuscript, ESPS 24328, is a case report presentation and describes a rare case of gastroduodenal Crohn's disease, diagnosed by careful clinical evaluation. The presentation is lucid, well focused, and supported by the interesting illustrations. Furthermore, the discussion is well supported by the pertinent literature.

COMMENTS TO AUTHORS

I am in favor of this case report from South Korea, but the degree of detail add nothing to its value. The statements are repetitive and do not enhance the value of the paper. I have taken the liberty of editing the manuscript which I hope will help the authors to both shorten the paper and eliminate at least half of its length. Furthermore the number of references is much too many for support of the study and the authors should eliminate those which are superfluous as well as being more precise in matching them to the statements made in the text.

COMMENTS TO AUTHORS

The authors report on a rare case of Crohn's disease (CD) isolating affecting the duodenum. The paper, especially the discussion, is too long and should be shortened. The blood test, for example, can be summarized as well. As far as I understood, there is no biopsy, which proved the diagnosis of CD. The patient has just responded to corticosteroids, which makes CD likely. Please comment on that.
