COMMENTS TO AUTHORS

Dear authors, In this paper entitled “Cronkhite-Canada syndrome polyps infiltrated with IgG4-positive plasma cells”, the authors demonstrated interesting case with Cronkhite-Canada syndrome. As the authors mentioned, Cronkhite-Canada syndrome caused protein losing enteropathy. This case report adds suggestive information to the WJG readers. There are some comments as desibed below.

1. In page4 line 9, the pathological findings of resected polyp showed a serrated adenoma. Serrated adenoma is incompatible with Cronkhite-Canada syndrome(CCS)?
2. CCS and juvenile polyposis is similar on histopathologically. Please describe the defferentiaon of the CCS and juvenile polyposis i pathological view.
