COMMENTS TO AUTHORS

This work can be a contribution if modifications that add clinical data of importance are made. As it is a rare case, the clinician to read the article will want to know details of presentation, diagnosis and treatment employees and why they failed, as the case ends with the death of the patient. The case is very interesting. Probably when you, as a doctor, receives the news that a patient has Kikuchi's disease, you should study or review the disease, because it is a rare condition. Now if the patient is dying, what you want from the literature is whether other doctors have faced the same situation, and that is the value I see in your article. But to deliver valuable information there are several points that should be added.

COMMENTS TO AUTHORS

Kikuchi-Fujimoto disease is an extremely rare disease. The authors highlighted that KFD carries a risk of mortality in the setting of acute, aggressive disease, which is in contrast to the benign, self-limiting condition that has been classically documented in literature. This set of cases emphasizes the importance of recognizing the fact of DIC as a cause of fatality in these patients.
