COMMENTS TO AUTHORS

The authors present a rare case report of aggressive multifocal and recurrent instant restenosis in a patient with HIV infection. This manuscript is nicely structured and well written. I have no question about this manuscript.

COMMENTS TO AUTHORS

The authors report a clinical case of a patient with HIV infection on antiretroviral therapy with recurrent in-stent restenosis requiring several percutaneous intervention and finally CABG. The case is interesting and well written. My only comment would be to mention in the discussion whether changing the DES type for other DES releasing different drugs (rapamycin, zotarolimus, paclitaxel) may be helpful in this context or not (not evaluated in this patient).
