COMMENTS TO AUTHORS

The authors present a case report and review of the literature in a very specific topic. No much is added to the current literature and somehow it would be perhaps if greater interest to a psychiatric reader than to the surgical community. However, it is well written and structured.

COMMENTS TO AUTHORS

The authors have reported that this case is relevant as it clearly describes important clinical lessons learned from the psychological and surgical management of a case of recurrent Rapunzel syndrome. Rapunzel syndrome represents the longest interval between initial treatment and presentation with relapse of the condition. The key message is that although surgery is the initial treatment, a comprehensive and long-term postoperative psychiatric follow-up is needed in patients. The Latest Reference is used of Houghton DC, Capriotti MR, De Nadai AS et al. (2015) Defining treatment response in trichotillomania. The paper may be compared with some papers already published till Aug2016, as a comparative study and Resubmit.

COMMENTS TO AUTHORS

An interesting case, focusing on surgical as well as psychiatric treatment of Recurrent Rapunzel Syndrome. Albeit a rare condition, the paper provides a thorough review of the literature and adequate advice on the management.
