SPECIFIC COMMENTS TO AUTHORS

In page 5 it is mentioned “Autopsy study of the edges of BCS lesions confirm upregulated expression of hypoxia-inducible proteins, such as heat-shock protein 70, hypoxia-inducible factor-1 α , and D-110.” The gene expression of the hypoxia-inducible

factor-1 α is not upregulated in hypoxia but the protein is rather stabilized under these conditions. The monoclonal antibody D110 is rather a marker of hypoxic tissue damage preferentially expressed in the central nervous system than a protein upregulated in hypoxia.

SPECIFIC COMMENTS TO AUTHORS

Dear Editor: Dr. Ertuğrul and colleagues described a case report of Balo's concentric sclerosis with spontaneous remission based on a serial MRI findings. In general, the paper was well written. Some minor issues should be clarified before the acceptance. 1.

The term "healing" in the topic seems inappropriate, please revise it to "remission" or "resolution", or "remitting". 2. Some typos are present, please correct them. 3. A table to describe previous cases is needed. 4. The differential diagnosis includes vasculitis such as systemic lupus and infectious disease. The authors should mention what examination carried out to make a differential.

SPECIFIC COMMENTS TO AUTHORS

This is a rare case report about Balo’s concentric sclerosis. This manuscript is nicely structured and well written. I have no question about this manuscript.
