SPECIFIC COMMENTS TO AUTHORS

This manuscript reported two cases of anatomically rare maxillary first molar with 2 roots and 2 root canals by using CBCT three-dimensional imaging technique. It has important significance for clinical diagnosis and endodontic management.

SPECIFIC COMMENTS TO AUTHORS

ESPS Manuscript NO: 42903 Title: Endodontic management of the maxillary first molars with two root canals: Report of two cases This clinical case described the rear first molar anatomy with only two separate root canal. The authors systematically described the

clinical symptoms and examination of rear case of root canal anatomy of the maxillary first molar. The diagnosis include X-ray and CBCT imaging which showed the anatomical variation of the maxillary first molar with two roots and two canals continuing with the non-surgical endodontic therapy with assistance of a dental operating microscope (DOM). The text is easy to follow as well as readable and presentable. The title accurately reflects the major topic and contents of the study. Abstract gives a clear description of the research background. It also necessary to remove the comments in abstract section. The text is accompanied with appropriate figures. In conclusion, this is a very interesting case report which provides a description of the rare case of first molars with two root canals and their diagnosis and treatment.
