rhabdomyolysis associated with Gitelman syndrome (GS) and diabetes. Main comments 1. Some language editing is needed. For example, in line 61, it should be “well known”, not “wellknown”. 2. Please include references in the Introduction section. 3. Please also include some introduction knowledge of SLC12A3 and its mutations. 4. The description of lab examinations contained too many parameters. Please use tables to indicate the values of those parameter so that others are easy to check. Please also indicate the parameters that are out of the normal ranges. 5. The history of GS discovery should be moved to the introduction section. 6. In addition to data shown in Figures 1 and 2, it would be very helpful to show the full panel of plasma parameters after the treatments.
