SPECIFIC COMMENTS TO AUTHORS

The authors presented a very case of pancreatic lipoma in a 59-year-old female. As the authors stated lipomas are easy to identify on imaging. They clearly highlighted the radiological features distinguishing a pancreatic lipoma from a pancreatic liposarcoma

SPECIFIC COMMENTS TO AUTHORS

This case report describes a rare case of a huge lipoma in the pancreas. Further information regarding the followings would be appreciated: #1. The differentiation diagnosis between lipoma and liposarcoma with imaging modalities: which findings

were suggestive of sarcoma? #2. More evidence suggestive of the pancreas origin may be necessary, because the pancreatic duct was intact in the MRCP: did the angiogram show whether the tumor was fed by the pancreatic branch?; were the macroscopic findings suggestive of the pancreas origin?; was an immunohistological exam performed to detect elements originating from the pancreas tissue?
