This is an interesting study about the clinical effects of Modified Cortex Mori Capsules, a Chinese medicine on glaucoma. This study is well designed and the results are interesting. Glaucoma is an optic neuropathies characterized by progressive degeneration of retinal ganglion cells. TCM has advantages to prevent fibrosis formation through regulation of systemic circulation and improving properties of the inflammatory cells in the blood. 1. The manuscript requires an editing both the style and the English. There are some minor language polishing. 2. The discussion is good. However, the references seems not new. Please update the references list.

Interesting study about Modified Cortex Mori Capsules to prevent fibrosis formation through regulation of systemic circulation and improving properties of the inflammatory cells in the blood. This study is very interesting. The sample size is enough. The inclusion criteria is clear. The groups properly divided. The follow up is very clear. Figures and table are good. I only suggest the authors to update the manuscript for some minor language polishing. And also, the references style should be edited.
