## SPECIFIC COMMENTS TO AUTHORS

In this MS, the authors investigated US evaluation of the effect of extracorporeal shock wave therapy on calcific tendinopathy of the rectus femoris tendon in a case. Some problems existed. 1. The language needs to be improved because of some grammar and punctuation mistakes. 2. Abstract: This part is too long and should be greatly shortened. An abstract for a case report is non-structural without background, case summary and conclusion. Just describe the background, treatment, prognosis, your case and results. Please refer to a published article for your reference. 3. Key words: Please use full phrase rather than abbreviations in this part. Replace the ESWT with the full phrase. 4. Use of abbreviations: When using an abbreviation, the full phrase is given at the first time of use. Later, you can always use the abbreviation without mentioning the full phrase. However, the authors did not abide by this rule all the times. For example, NSAID was used without giving the full phrase. In the text, ESWT was given the full phrase at the first time of use. However, at the second time, the full phrase was used once again. 5. INTRODUCTION: In the second paragraph of this part, the author said that "However, plain radiography can lead to mistake without additional diagnostic tools such as CT or MRI". This expression is wrong, and it should "----can lead to mistakes without additional check-up with other diagnostic tools such as CT or MRI."
