

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 51293

Title: Expression of interleukin-32 in bone marrow of patients with myeloma and its prognostic significance

Reviewer's code: 01735331

Position: Peer Reviewer

Academic degree: MBBS, PhD

Professional title: Professor, Research Associate, Research Scientist

Reviewer's country: United States

Author's country: China

Reviewer chosen by: Jin-Lei Wang

Reviewer accepted review: 2019-10-15 00:29

Reviewer performed review: 2019-11-04 01:40

Review time: 20 Days and 1 Hour

SPECIFIC COMMENTS TO AUTHORS

Currently, the sequential application of various therapies, including lenalidomide and protease inhibitor, has significantly prolonged the survival time of patients, but their prognosis is still far from ideal, and their heterogeneity and early recurrence rate are higher. Attention should be paid to find out a highly sensitive and reliable indicator for evaluating the prognosis of patients with the minimal residual disease detection technology development. There is little research about this field, and the ability of IL-32 to evaluate the prognosis of patients is not clear. In this study, the authors analyzed the expression of IL-32 in the bone marrow of multiple myeloma patients, and explored the impact of IL-32 on the prognosis of multiple myeloma patients. 1. A minor language editing is required for the manuscript. 2. Data in the tables are informative, but the tables requires an editing. 3. Too many references, and the discussion is long. I suggest the authors check and delete some very "old" references.
