The manuscript is well-written and does provide up to date information on the case and published literature. I could not see any figures attached to the submission, which need to be verified. If the figures are satisfactory, I would recommend to accept the manuscript for publication in the journal.

SPECIFIC COMMENTS TO AUTHORS

The authors reported a case with isolated peritoneal lymphomatosis which was defined as (post-transplant lymphoproliferative disorder) PTLD in a liver transplant recipient. The patient had a history of liver transplantation for 15 years. It was believed by the authors that this is the first report of isolated peritoneal lymphomatosis defined as PTLD in a liver transplant recipient. This is a very interesting and well-organized paper. There are two minor problems with this paper: 1. As depicted in the manuscript, the patient suffered from ascites. However, I did not know how much the ascites were because I could not see the submitted CT image. My concern is whether the author has detected tumor cells in ascites. 2. Although the paper has been polished in English, there were still minor errors. For example, Page 7 line 20, "but he did not want to reduced the dose of the tacrolimus." The word "reduced" should be replaced by "reduce".
