As authors mentioned, this case was rare and clinicians should be familiar with such conditions. Several issues listed below should be clarified. 1. Follow-up period should be clarified, and more longer follow-up period might be preferred. 2. The titer of HBs-Ab should be shown. The presence and timing of HBV-vaccination should be described. 3. The finding of cholecystitis was found in this case. The value of inflammation markers such as CRP or ESR should be shown.
