**SPECIFIC COMMENTS TO AUTHORS**

General comments The article by Jie He, et al. is case reports with intravenous leiomyomatosis. Leiomyomatosis is a rare disease, and the authors presented three patients, who underwent a different surgery according to the extent of invasion and

involved organs. Specific comments Title: Title should be changed to “Intravenous leiomyomatosis with different surgical approaches: Reports of three cases. Abstract: “Case Summary” is very simple. Being very important in the article, the abstract should contain more concrete and informative contents. Case 2: Explain more signs and symptoms.

**SPECIFIC COMMENTS TO AUTHORS**

The authors described three cases of intravenous leiomyomatosis with different surgical approaches. This case report was described well and interesting. Several comments might lead to publication. 1. Are there any criteria for choosing the stage of operation?

I think the malignant potential of tumor in case 1 is not acceptable criteria rather than adhesion. Discuss about the pros and cons of one-stage and 2-stage operation and any indication of it. 2. Present the perioperative data of these three cases (operative time, blood loss, pathologic results and so on). Compare with other care reports and discuss about it. 3. In case 2, the patients had a history of hysterectomy, but total hysterectomy and BSO were performed once more? 4. The 2nd paragraph of discussion is not read easily. It should be divided, so long paragraph. 5. Discuss more about the minimally-invasive approach profoundly.

**SPECIFIC COMMENTS TO AUTHORS**

Abstract is too short. Introduction must be enriched with epidemiological data. References are few. Histology makes diagnosis, images should be better described, optical enlargement, slide staining and possible immunohistochemistry should be
