lipid transfer proteins that mediate cellular activity and metabolism in tumor cell proliferation, migration and invasion. The topic of the review is quite interesting, and diligent efforts of reading the manuscript attests to the scientific value of this contribution, the paper suffers considerably from the grammatical and stylistical shortcomings. Hence, before any further considerations, the entire text of this paper requires English re-editing. Also, the “Conclusions” section should be rewritten, so it is devoid of “bombastic” and empty statements regarding the “glorious” future of OPR in malignant tumor treatment.

the following 1.- add tables where the information reported so far is summarized. where the study model, finding, mechanism is described 2.- You can make some figure where its mechanism of action is described in detail and the routes that are activated or inhibited by the ORPs. 3. ORPs have an anti-inflammatory or antioxidant or free radical-forming effect. Does the nuclear factor Nrf2 participate? 4. What are the perspectives of ORPs in malignant human tumors?
