Conflicts-of-Interest: [ ] Yes [Y] No

#### **SPECIFIC COMMENTS TO AUTHORS**

This is a report of instructive practical case the author experienced. The physicians that may encounter the same kind of course will benefit from the option of differential diagnosis when they detected peculiar CT findings. Figure 2 and 3 should be the same frame, especially Congo red staining of Fig.1 HE picture will be helpful. Does homogeneous eosinophilic portion of the bronchial tissue contain no Amyloid?

#### **SPECIFIC COMMENTS TO AUTHORS**

A subset of patients with Waldenstrom Macroglobulinemia (WM) demonstrates extramedullary involvement, and the most frequent extramedullary disease sites involved are the lungs (30%) [Banwait R, Aljawai Y, Cappuccio J, McDiarmid S, Morgan EA, Leblebian H, Roccaro AM, Laubach J, Castillo JJ, Paba-Prada C, Treon S, Redd R, Weller E, Ghobrial IM. Extramedullary Waldenström macroglobulinemia. *Am J Hematol.* 2015 Feb;90(2):100-4. doi: 10.1002/ajh.23880]. Therefore, the case report entitled “Extensive multifocal and pleomorphic lesions in Waldenström’s Macroglobulinemia via Pulmonary CT Imaging: a Case report” is worthy to be published. Only a few points to discuss. I would change the title in “Extensive multifocal and pleomorphic pulmonary lesions in Waldenström’s Macroglobulinemia: a Case report”. Then I wonder if some of the lesions described could be ascribed to smoking history.
