SPECIFIC COMMENTS TO AUTHORS

Overall this is a nice case report, however it lacks novelty, This issue has already described in several case reports and measurements to minimize the risk for spinal cord injury following TACE are known such as performing selective catheterization and etc. The manuscript is disorganized, the section of case presentation should be organized without the subheadings in this section It is strongly recommended to include a summarizing table including all the cases that were reported to date

SPECIFIC COMMENTS TO AUTHORS

The authors presented a case of spinal cord injury after TACE in a child with clear cell sarcoma of the kidney. The patient suffered sensory loss below the T10 dermatomes and paraplegia. This complication after TACE is uncommon and is already well-known among radiologists. However, TACE is not common in children. Title: OK Abstract: OK Introduction: OK Case presentation: OK Discussion: Font size is not consistent. Conclusion: 'Detailed imaging examinations such as contrast CT and CBCT or 3D-DRA prior to and during surgery and low pressure to infuse lipiodol can be applied to help to reduce the complication rate.' ... This message is not supported by the presented case. Please delete it. Page 5, line 27, 'Few cases have been...' What kind of cases? References: OK Figures: Please annotate the lesion with arrows. Some readers might be unfamiliar with radiographic images. Indicate which is T1WI (should be the first image) and T2WI (the second).

SPECIFIC COMMENTS TO AUTHORS

Dear Authors, interesting case. This case report reflects what have been previously reported in the literature for TACE for unresectable HCC. However it could be interesting to describe the neurological status as well as also what the neurological consultant described after this paraplegia. Did the patient tried a period of rehabilitation? I also suggest to perform an English Editing. Thanks for your attention.
