SPECIFIC COMMENTS TO AUTHORS

Interesting case, but some major revisions are necessary in my view. The language should be reviewed, corrected and improved; the "Conclusion" in the abstract is too scarce, superfluous if written in this way. The "Case presentation" is too schematic, it should be more fluid and discursive, without sub-paragraphs. It would be interesting to add some information about the recommended discharge therapy. Have you thought about any genetic or rheumatological tests to prescribe, in suspicion of an autoimmune disease? Has a relationship been hypothesized with an autoimmune form of pancreatitis?
