This paper is well written, but you need to answer the following questions. It would be better if a diagnosis could be made before endoscopic treatment. It is better to fix the details of H.pylori and AIG. 1. H.pylori infection cannot be determined only by the results of the biopsy of the antrum. 2. In this case, was there any finding of autoimmune gastritis? 3. Line 20 in the "Discussion"; Biopsy specimen from the orifice of the SMT may contribute to diagnosis. Figure2A; It is better to show the midline section including the orifice.
