SPECIFIC COMMENTS TO AUTHORS

The authors report a case of a giant breast mass, with an incidental pulmonary nodule, which confused the diagnosis until final surgical pathology. Review of the literature identified a number of cases of giant (>20cm) phyllodes tumors and summarized into a nice table. A worthy addition to the literature, which I would accept with a few suggestions below. General Recommendations: 1. Recommend author re-review of manuscript for reviewer-noted double spaces between words, incorrect spellings (outlined below), lack of capitalization at the beginning of multiple sentences, etc. I have outlined only a few of these here a. Page 3, case summary: "diagnosise" should be changed to diagnosis b. Page 3, case summary: "conformed" should be changed to confirmed c. Page 6, imaging examinations: "firsts" should be changed to first d. Page 9, can omit the word "the", in "...more like the cachexia" Abstract - Recommend adding to the abstract that this manuscript includes a literature review, and describe what exactly the literature review includes. Literature review - Recommend adding a statement to the Discussion section that indicates "how" your literature review identified the 20 cases... what was used (e.g. PubMed, Medline), what was required for inclusion, etc Conclusion - well written and a nice summary
