PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 56797

Title: Diagnostic value of ultrasound in the spontaneous rupture of renal angiomyolipoma during pregnancy: a case report

Reviewer's code: 01438831

Position: Peer Reviewer

Academic degree: MD, PhD

Professional title: Chief Doctor, Surgeon

Reviewer's Country/Territory: Japan

Author's Country/Territory: China

Manuscript submission date: 2020-05-20

Reviewer chosen by: AI Technique

Reviewer accepted review: 2020-05-22 01:48

Reviewer performed review: 2020-05-26 05:17

Review time: 4 Days and 3 Hours

SPECIFIC COMMENTS TO AUTHORS

This is a rare case of ruptured RAML during pregnancy diagnosed by ultrasound. If it is possible, invasive tests should be avoided for pregnant woman. This case was in a really challenging state. I have three questions as mentioned below. 1. Was it really possible to exclude renal cell carcinoma or other diseases only by ultrasound and unenhanced CT, especially such a ruptured state? 2. What timing of pregnancy are ruptures of RAML more common? 3. How was the estrogen or progesterone receptors in this tumor?
