#### **SPECIFIC COMMENTS TO AUTHORS**

This is a review with distinctive themes and characteristics of the times. It is worth reading by anyone involved in the work related to new coronary pneumonia. The authors have read a lot of relevant literature and have detailed data. But there are some problems. 1. The language lacks sufficient readability, and some sentences are not fluent or even difficult to understand. 2. Some references and discussions are difficult to correspond to, and it is difficult to match expressions and citations. Some statement needs to be indicate references, but they are not listed. for example, page 17,line 7,Eliezer et al. 3. Only a few of the first patients were related to the Huanan market inWuhan China . Therefore, the correlation between the market and the disease is not conclusive, and it is more inclined to guess. 4. The related symptoms of the liver mainly stem from secondary damage during treatment, and there is no clear proof that the virus damages the liver and causes relative clinical manifestations. Is it accurate to state directly in Core tip that acute hepatitis is a rare symptom? The results of pathological studies have been elaborated by Yao. It is recommended to add some documents to this part and modify the wording.[Yao XH, Li TY, He ZC, et al. A pathological report of three COVID-19 cases by minimally invasive autopsies]. Chin J Pathol. 2020 Mar 15;49(0):E009.]
