

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 55413

Title: Clinical study on the surgical treatment of atypical lisfranc joint complex injury

Reviewer's code: 03254376

Position: Peer Reviewer

Academic degree: FCPS, MBBS, MD

Professional title: Professor, Research Fellow, Research Scientist

Reviewer's Country/Territory: United States

Author's Country/Territory: China

Manuscript submission date: 2020-05-10

Reviewer chosen by: AI Technique

Reviewer accepted review: 2020-05-11 07:48

Reviewer performed review: 2020-06-03 00:42

Review time: 22 Days and 16 Hours

SPECIFIC COMMENTS TO AUTHORS

The diagnosis and treatment level of Lisfranc injury varies greatly in different hospitals, resulting in a high rate of missed diagnosis. The diagnosis and classification of typical Lisfranc injury are well known, and the principles of their treatment have formed a certain consensus. While some atypical Lisfranc joint complex injury do not have typical features such as metatarsal ray displacement and widening of the Lisfranc joint space, their clinical symptoms are obvious, the violence suffered at the time of injury is large, and the radiological findings are only avulsion fractures around the Lisfranc joint complex. In this study, the clinical data of 18 patients with Lisfranc joint complex injuries were analysed. Overall, this study is very interesting. The methods are clear, and the results are reasonable. Some minor comments: 1. The manuscript requires a minor editing. The title page include the author list are missing, please check and revise. 2. The tables and figures are very interesting. Please move them to the end of the document, and add the refer of the table and figures in the main text. 3. References list are acceptable. Please editing it according to the journal's guideline. Maybe a Endnote will be helpful.

SPECIFIC COMMENTS TO AUTHORS

Interesting study. An editing of language is required before acceptance.
