#### **SPECIFIC COMMENTS TO AUTHORS**

In the proposed manuscript, Zhou et al. present a patient treated with intravesicle gemcitabine instillation chemotherapy for urothelial carcinoma, which resulted in an uncommon complication – lung injury. Based on the presented clinical case, the authors of the manuscript cautioned that health care professionals who administer gemcitabine should monitor for the development of gemcitabine-induced pulmonary toxicity, particularly in patients who are at high risk. My general opinion for this manuscript is that the case is presented well and clear. The quality of the English is also good. I would advise to the authors, to discuss the molecular mechanisms of action of gemcitabine and its toxicity, especially in predisposed patients and additionally age, male gender, previous pulmonary concomitant disease, etc.

## RE-REVIEW REPORT OF REVISED MANUSCRIPT
