SPECIFIC COMMENTS TO AUTHORS

In this manuscript, authors reported a rare case of combination of acanthosis nigricans, Leser-Trelat's sign, and tripe palm in a patient with gastric cancer. This seems to be an interesting case report. However, there are some concerns in this report. The reviewer's comments are described as follows. 1. Case reports of acanthosis nigricans, Leser-Trelat's sign, and tripe palm associated with malignancy have already been published. Although at least five reports were found by Google search (Zhang et al. *Int J Dermatol* 2015; Pentenero et al. *Int J Dermatol* 2004; van Hangen et al. *J Med Cases* 2011; Da Costa Franca et al. *JEADV* 2007; Chen et al. *CMAJ* 2019), none of them were appropriately cited by the present manuscript. Authors have to explain and discuss why this case was so unique and what was different from previous similar case reports. 2. In case presentation, authors should describe whether this patient had cancer-related symptoms such as abdominal pain, appetite loss, and anemia before the diagnosis of gastric cancer. Furthermore, since autoimmune diseases can be also related with acanthosis nigricans, Leser-Trelat's sign, and tripe palm, authors should describe positive or negative symptoms and laboratory data associated with autoimmune diseases. 3. In this case, chemotherapy preceded laparoscopic surgery against gastric cancer. Authors should explain why the chemotherapy was preceded. In addition, authors should describe the stage of gastric cancer (including TMN classification) at diagnosis. 4. Authors concluded that clinician should pay attention to the special manifestations to early diagnoses malignancy. However, acanthosis nigricans, Leser-Trelat's sign, and tripe palm are usually associated with advanced cancers. Is there any evidence that these special manifestations can be associated with early stage of cancers? 5. In Figure 1, authors should present larger images of skin (A) and endoscopy (B). In endoscopic images, unnecessary images should be removed. In addition, clearer images of gastric mucosal

tissue should be presented in E. Staining methods (names) of the images in E and F should also be described in the figure legend. 6. In Figure 2 A and B, authors should indicate the tumor by arrows.
