The paper includes case report on hemophagocytic syndrome (HPS) as a life-threatening hyperinflammatory syndrome, which diagnosing can be extremely difficult. However, it is important because early therapy directly affects the morbidity and mortality of patients. The treatment, outcome and follow-up are set out in detail. The important tip is that bone marrow biopsies of the liver and spleen should be conducted to actively find pathological evidence. The title is consistent with the main subject of the manuscript, the abstract and key words reflect the main topics of the entire text. The review is informative and helpful. The tables capture information concisely, the figures are illustrative of the paper contents. The paper cites 18 relevant and important references. The manuscript is well written, and the literature data is discussed well. I suggest to accept the manuscript with no specific comments.
